

Parkland Community Health Plan, Inc. and Vital Data Technology have united to share meaningful member information at the point of care at **no cost to you**. This service provides you three key benefits:

1. Vital Data Technology's product, **Dr.Link**, notifies your office by e-mail or text if your Parkland member visits an emergency room. This real-time communication allows for follow-up care coordination, appointment scheduling, and education.
2. Your office can also log into the **Dr.Link** web-based tool to access the patient's comprehensive 360 degree view of the member's medical summary information including recent encounters, procedures, lab results, medications including last refill date, HEDIS information and more.
3. In addition, your office may gain information to new member history prior to joining Parkland including current medications, ER encounters, specialist visits and previous diagnoses.

This is a web-based solution that is secure and does not require any integration with your existing systems. Once you sign up you will gain access to more member information than ever before!

For a demonstration, a sample member report or to find out more information contact Tammy Moore, VP of Client Operations, at [tmoore@vitaldatatech.com](mailto:tmoore@vitaldatatech.com) or call 949-719-9014. [www.vitaldatatech.com](http://www.vitaldatatech.com)
